

The New Gourmet Cooker a Tasteful Addition

The perfect combustion heater/cooker,
giving large space heating ability and excellent
responsive hotplate and oven cooking.

GOURMET

C O O K E R

EXCELLENCE IN INNOVATION

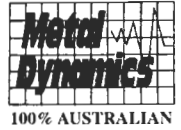

"Now I know why there are so many people who enjoy chopping wood. In this activity one immediately sees a result". Albert Einstein.

Likewise your gourmet will provide immediate satisfaction - with space heating ability larger than most heaters, large hotplate area for all your cooking needs or simply to make a delicious cup of

percolated coffee and large oven with clever built in temperature adjustment.

Smiles all round as the delicious aroma of home cooking and gentle warmth turn a house into a home.

GOURMET COOKER

The introduction of the versatile gourmet cooker has given Metal Dynamics a market edge. Metal Dynamics now has one of the largest range of combustion cooking stoves, hydronic central heating cookers and boilers on the market.

The new gourmet is a combination cooker-heater with a large cook top surface, huge glass front self cleaning oven with thermometer for accurate temperature control and a unique venting system which allows easy control of oven temperatures. The firebox is above the oven giving excellent hotplate temperatures and reducing the amount of bending when refuelling.

The magic of the flames can be seen through the self cleaning glass on the firebox door, a feature not usually associated with cooking stoves.

The gourmet has excellent heating ability without sacrificing the features required for a good cooking stove.

The gourmet is as much at home in the family or living room as in the kitchen where its dual purpose makes it a cost efficient option.

The gourmet is available in four colours:- Moss Green, Blue, Golden Fire Brown and Metallic Black, with a crisp, clean Chrome Trim.

The firebox is large and super responsive. The oven comes standard with oven rack and tray. A full set of instructions come with the gourmet.

The gourmet will burn coal, but is more suited to burning wood, having both top and bottom air controls.

An optional hot water jacket (wet back) to provide piping hot water for all the families needs and save on hot water bills, and also an optional splash back are available for the gourmet.

At Metal Dynamics our designers and product development people understand the importance of building stoves that are user-friendly.

All gourmets are hand built by experienced craftsman to give the quality and individuality not achieved by mass production. The gourmet is also available in a C.D. (central heating) model with a boiler output of approximately 15kW - more than enough to heat the average three bedroom home.

As a way of saying thank you our gourmet buyers Metal Dynamics send a free gift to all gourmet owners on return of the warranty card.

Flue Pipe with Single Shield	125	400	400

PRICING		FLUE	
STOVE		INSTALLATION	
WET BACK		OTHER OPTIONS	
SPLASH BACK		TOTAL	

INSTALLATION

We recommend that you engage a qualified installer to fit the flue and check that the stove is drawing correctly. Also that it meets local building regulations. The Gourmet Cooker can be supplied with or without the boiler, which is situated at the back of the firebox. If not required additional firebricks are fitted in its place. The Gourmet Cooker can also be adapted to utilise auxiliary solar panels.
